Education

Universitat Autònoma de Barcelona and Barcelona GSE <i>PhD, Economics</i> Supervisor: Dr. Nezhil Guner	Barcelona 2014–2018 (expected)
Universitat Autònoma de Barcelona and Barcelona GSE <i>MSc, Economics</i> Supervisor: Dr. Nezhil Guner	Barcelona 2012–2014
Thesis: "Labor Market Policies and Aggregate Dynamics of Worker Turnover over Business Cycle"	
Moscow State University <i>Specialist, Medical Physics</i> Supervisor: Dr. Fazly I. Ataulakhanov	Moscow 2002–2008
Thesis: "Dynamic Molecular Mechanical Model of Microtubule"	

Research Interests

o Macroeconomics, Applied Economics, Labor Economics, Demographic Economics

Research Experience

Visiting Researcher <i>DIW Berlin, EVA-MIN project</i>	2017
Research Assistant for Nezhil Guner <i>Universitat Autònoma de Barcelona</i>	2014–2016

Teaching Experience

MatLab Brush-Up (Graduate) <i>Barcelona GSE, Lecturer</i>	2016–2017
Empirical Macro, Financial Economics and Fiscal Policy (Graduate) <i>Barcelona GSE, Teaching Assistant</i>	2017
Microeconomics II (Graduate) <i>Universitat Autònoma de Barcelona, Teaching Assistant</i>	2017 and 2014
Macroeconomics I (Graduate) <i>Universitat Autònoma de Barcelona, Teaching Assistant</i>	2014–2016

Working Papers

Why Are Older Americans Working More Nowadays?

Job Market Paper

Both labor force participation and hours per worker of seniors, individuals above age 62, have been growing steadily in the US since the mid 1980s. This is in contrast to the long decline in the labor supply of seniors that began as early as in the 1950s. This paper uses data from the Health and Retirement Study (HRS) to estimate a life-cycle model of labor supply, retirement, and wealth accumulation in order to contrast the labor supply behavior of two cohorts in the US: individuals born after World War I ("the Great Depression Kids"), and those born after the World War II ("the Baby Boomers"). The paper focuses on the differences between these two cohorts in earning and health dynamics as well as policies that they face, a gradual increase in Normal Retirement Age and the elimination of the Earnings Test in 2000, as potential sources of change. The results show that the effects of policies and policy-unrelated factors are of similar magnitude. The elimination of the Earnings Test had the biggest impact of all policies. Jointly, the rise in out-of-pocket medical expenditures and the increase in life expectancy are the dominant factors among non policy-related ones.

Reservation Wages and the Minimum Wage Reform

with Alexandra Fedorets and Cortnie Shupe

We use the German Socio-Economic Panel to show that an introduction of a high-impact statutory minimum wage causes an increase in reservation wages. This adjustment is especially pronounced for men and German citizen. Migrants exhibit downward adjustment of their reservation wage. This result has can have implications for job search and unemployment duration.

German Minimum Wage Reform and Unemployment Duration

with Alexandra Fedorets and Cortnie Shupe
